Micro Irrigation

P4 Snap Dripper

The P4 Snap Dripper is a simple, economic dripper and is designed for applications requiring a reliable, consistent flow at low operating pressures. The two part design allows for easy disassembly if cleaning is required and the dripper tap snaps securely back into the body.

- ◆ The Snap Dripper delivers a flow rate of 4Lph at a pressure of 100kPa, with a co-efficient of variation at less than 5%
- ◆ The 4mm barb can be installed directly into 13mm or 19mm micro irrigation pipe or use 4mm riser tube to place the dripper away from the pipe
- ◆ Micro tubing can be fitted to the 4mm barbed outlet if water is to be directed to pots etc.
- ◆ The Snap Dripper provides a controlled water supply for all agricultural and landscape requirements
- ◆ Manufactured from UV stabilized polypropylene, ensuring optimum material stability and an extended life span
- ◆ The gentle drip output ensures direct wetting of plant root zones where water is needed most and reduces the establishment of weeds
- ◆ The dripper can be pulled apart for easy cleaning
- ◆ Approximate size 40mm x 20mm

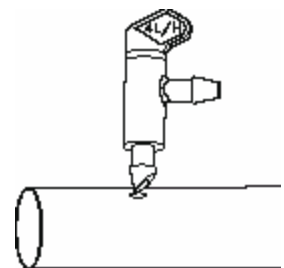

P4 Snap Performance Data

Pulls apart for easy cleaning

Fit to 4mm riser tube

Fit to 13mm or 19mm micro irrigation pipe
